1. **INTRODUCTION**

The project is being undertaken under NIRDESH for the WDB under Research & Development initiative of NIRDESH and intends to undertake Project for development of capability to undertake Propulsion Plant Vibrational Analysis for all the existing and future Naval Platforms.

The aim of this 'Capability Enhancement Approach' is to **develop capability** to undertake the following with the use of analytical methods / globally accepted and certified software tools like Nauticus, Shaft Designer etc. and extant Engineering Standards / reference books:-

(a) Detailed Mathematical Modelling (Mass Elastic Model) of the prime mover, gearbox, shafting, propeller and shaft line components like plummer bearings, thrust block, couplings etc. suitable for Torsional, Lateral and longitudinal Vibration analysis of the propulsion system in different modes of operation.

(b) Torsional, Lateral and Longitudinal Vibration analysis of the main propulsion system in various modes of operation. The scope of analysis should cover (but not limited to) various excitations including propeller generated excitation, responses and vibration modes, critical speed evaluation, stress evaluation at critical locations, graphical presentation of results e.g. Campbell diagram etc.

2. **SCOPE OF ASSOCIATION**

NIRDESH is seeking response from eligible Indian startup firms willing to collaborate for undertaking Research & Development projects by deputing their engineers in Centre of Excellence (CoE) of NIRDESH, which is residing inside premises of Mazagon Dock Shipbuilders Ltd, Mumbai. Working environment will be provided in the CoE.

3. **ELIGIBILITY TO BID**

Definition of Indian Startup Firm:

- a) An Indian startup firm, an Indian entity including incorporation/ ownership models as per the Companies Act, 2013, Partnership Firm, Proprietorship and other types of ownership models including Societies as per relevant laws, complying with, besides other regulations in force, and the guidelines/licensing requirements stipulated by the DPIIT/Government of India.
- a) The firm must be willing to depute their manpower in Centre of Excellence (CoE) of NIRDESH which is residing inside premises of Mazagon Dock Shipbuilders Ltd, Mumbai. Working environment as required, will be provided in the CoE by NIRDESH.

- c) The firm should have an annual turnover NOT exceeding 100 Crores(INR) in any of the financial years since incorporation.
- d) The participating firm must possess necessary knowledge of the field of collaboration and should be working towards innovation / development / improve of products and services.
- e) The relevant technology if any possessed by participating firm must be non-infringing while delivering the desired performance and it must be clear from third-party IP infringement claims.

4. **OBJECTIVE**

The Propulsion System (Main Engines, gearbox, shafting and propeller) of a ship operates under various operating conditions (speeds, torques / thrust, sea conditions) to meet the powering requirements for the mission profile. It is of utmost importance to undertake the design of the propulsion system for a satisfactory vibratory performance to avoid catastrophic failures and, undesirable noise during operation. Accordingly, during design, the vibration characteristics of the propulsion machinery as well as the shaft line & propeller needs to be analyzed in detail and necessary changes incorporated. Vibration Analysis of the main propulsion system primarily involves torsional, lateral (shaft whirling) and longitudinal vibration analysis covering the prime movers, gearbox, shafting & propeller.

Although, the vibration analysis of the main propulsion machinery as well as that of the shaft line & propeller is undertaken by the OEMs as part of their design and manufacturing responsibility, comprehensive in-house / indigenous capability towards the same needs to be developed to analyse the correctness and completeness of the reports submitted by the OEMs and also as a step towards the Atmanirbhar Bharat philosophy.

Presently, there is limited knowledge /capability within India and foreign OEMs having such capabilities are from advanced countries. These OEMs are hesitant in disclosing the basic intricacies / processes and analytics involved in vibration modelling and analysis and avoid in-depth discussions on the subject. Past efforts with OEMs for sharing domain knowledge have not been fruitful.

5. **SCOPE OF WORK (TECHNICAL REQUIREMENT)**

The scope of work covers development of comprehensive methodology, guidelines, procedures, utility software applications / modules etc. including suitable documentation inclusive of published technical / research papers, reference standards, extracts from technical books, software manuals etc. to completely and comprehensively achieve the Aim stated above.

In addition, certification of the developed methodology/procedure/guidelines through IACS needs to be obtained and a study needs to be undertaken using the developed methodology / procedure for validation of an existing design for which necessary data will be furnished.

The Propulsion plant vibrational analysis scope covers vibration analysis of complete propulsion train covering following aspects related to propulsion train, and requires extensive study material like research papers and technical books in support of arrived results and calculations. The firm/start-up/shall perform the following activities:

- (a) The analysis of the excitations with respect to critical speeds.
- (b) The analysis of the system damping characteristics.
- (c) The analysis of the frequency response (alternating torque and thrust) of the system to the torsional and longitudinal vibration modes.
- (d) The analysis of lateral vibration on the system.
